- Custom Fit to your opening

We offer an **extensive range of glass options** to suit any design preference or functional need. Whether you're looking for clear, frosted, textured, tinted, or custom specialty glass, we provide our clients with the widest selection of custom glass options available.

- 1/4", 5/16", 3/8", or 1/2" Glass Thickness
- Clear Tempered Glass
- Low Iron Tempered Glass
- Acid Etched Tempered Glass
- HydroClear Protected Glass
- OptiShower Tempered Glass
- Rain Glass
- Cast Glass
- Reeded Glass

GLASS *Explained*

Standard Clear

Standard Clear is the industry standard and the most widely used glass type for frameless shower doors and other architectural glass solutions. It offers a clean, timeless look with a subtle green tint that's most noticeable along the glass edges.

HydroClear Protected

HydroClear glass provides protection against water stains, soap scum, heat and high humidity. Unlike other products, the HydroClear solution fuses with the glass to permanently seal & prevent the glass from becoming hazy or dull in appearance. Glass is a porous material. HydroClear Glass is the glass industry's attempt to "fill in the holes" and make the glass less pervious to minerals, soap spots and bathroom products, & helps the water wick off the glass more quickly.

Low Iron

Low Iron tempered glass is a type of glass that has been processed to remove most of the iron content found in regular glass. This results in a higher level of clarity and transparency compared to standard tempered glass, which has a slight greenish tint due to its iron content. Low Iron glass is ideal for allowing better light transmission, ensuring a more accurate color representation through the glass.

OptiShower OW

OptiShower™ OptiWhite is our premium glass option, combining the ultra-clear aesthetics of low iron glass with a durable protective coating. OptiShower™ resists water stains, limescale buildup, and corrosion by preventing sodium leaching, a key cause of glass discoloration and spotting. This advanced on-line coating gives you a crystal-clear enclosure with less maintenance and long-lasting beauty.

Satin Etched

Satin Etched Glass has a smooth, frosted finish that provides privacy while still letting plenty of light through. Its soft, uniform appearance makes it a beautiful choice for shower doors and other interior glass. The etching can be applied to the glass as a whole, or to certain sections to create a “privacy strip”. Perfect for water closets, showers, windows, or anywhere that an added layer of privacy is needed.

Reeded

Reeded Glass features vertical ridges spaced ½ inch apart, creating a subtle distortion that adds privacy and an architectural look. For a clearer, more neutral appearance, choose Low Iron Reeded Glass. Small seeds, bubbles, and variations are natural characteristics of textured glass. Reeded glass complements a wide variety of interior styles, from mid-century and vintage to traditional or minimalist.

Bronze Tint

Bronze Tinted Glass adds a warm, brown tone that gives glass enclosures a rich, distinctive look. The tint softens the view through the glass and offers a subtle degree of privacy while still letting light through.

Grey Tint

Grey Tinted Glass adds a cool, smoky tone that pairs well with modern finishes. It softens the view through the glass and offers a subtle degree of privacy while still letting light through.

Grid Doors

Grid shower doors blend the clean look of frameless glass with bold, architectural detail. Featuring either printed ink grid lines or applied metal grids, these doors create a striking, modern statement while maintaining an open, airy feel.

Once considered a niche style, grid shower doors have become increasingly popular in both modern and transitional bathrooms. At ShowerDoorKing, we offer fully custom grid layouts, allowing you to choose the spacing, pattern, finish, and overall design to perfectly complement your space.

Whether you're aiming for an industrial edge, a classic steel-inspired look, or a subtle design accent, grid shower doors offer a unique way to elevate your bathroom without sacrificing the sleek benefits of frameless glass.

Grid Doors

Anodized Aluminum Flat Bar can be surface applied to either both sides or one side of the glass to create the 3-Dimensional look & feel. The applied grid patterns create depth and dimension while maintaining easy maintenance.

You can also opt to digitally print the grid lines using advanced Alice Printing Technology. This gives you the appearance of the grid lines while preserving a smooth glass surface for cleaning.

Our grid shower doors are custom-built around your space, style, and layout. Whether a full grid design, a more subtle pattern, or something in between.

Solid Brass Regal Series

The Regal Series is the perfect choice for those who appreciate superior craftsmanship, custom finishes, and an elegant enhancement to their bathroom. This collection of framed shower doors features meticulously handcrafted, custom-designed solid brass enclosures. The decorative plated finishes offer a mirror-like shine, while a wide selection of decorative glass options beautifully complements classic aesthetics. Built for durability, the solid brass shower frames boast a 1/8" wall thickness, reinforced by a 5/16" stainless steel piano hinge for added strength. We will collaborate with you to ensure every detail exceeds your expectations.

Steam Showers

Transom

A Transom is an operable piece of glass that sits between the top of the door and the ceiling, allowing for controlled ventilation. At ShowerDoorKing, we incorporate glass transoms to enhance both functionality and design. These operable panels help retain steam inside the shower during use, creating a spa-like experience, and can be opened afterward to allow proper ventilation and prevent moisture buildup. This simple yet effective feature makes you shower more enjoyable and practical.

Wine Cellar Glass

Custom Wine Cellar Glass allows you to showcase your collections without taking away from the functionality of a conditioned wine cellar.

With a variety of hardware including floor locks and lock & key applications.

Regardless of size, we can transform your wine storage into a dream wine cellar. Designed to add elegance to your home, while enhancing the functionality of the space.

Glass Railings

Glass railing systems provide builders with a clean, modern solution that meets safety requirements without compromising design intent. Ideal for staircases, balconies, decks, and loft spaces, each system is custom-measured, engineered, and fabricated to ensure proper fit and code compliance. We use durable tempered glass and proven hardware options that allow for efficient installation and consistent results across projects. The finished product delivers a streamlined look that enhances sightlines and adds long-term value to residential and commercial builds
